TRAUMASIM®

WHERE REALISM COUNTS

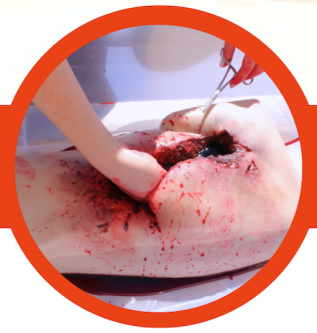

COMBAT TRAUMA THIGH KIT

TraumaSim's Haemostatic Clotting Trainer - Combat Trauma Thigh was designed for bleeding control, including arterial bleeding with secondary vascular haemorrhage and extensive wound compilations.

INCLUDES

BLOOD DELIVERY

2 litre Hand Pressure Pump. Allows for consistent pressurized flow and holds enough fluid for large training and repeat uses.

PACKING GAUZE

TraumaSim Compressed Gauze for wound packing

SIMUALTED BLOOD

1 litre of Ben Nye Stage Blood to be diluted 3:1 with water and used through the blood pump

COMPLETE KIT

Complete kit includes fluid catching container and TraumaSim carry bag

TraumaSim's Combat Trauma Thigh Kit is a realistic, robust training aid for the management of blast injuries resulting in critical haemorrhages. This is a multifaceted training aid requiring knowledge across multiple skill sets.

This training aid simulates a large blast injury resulting in an extensive wound profile for haemorrhage control training. With 2 bleeding sources: including arterial and vascular involvement, trainees will need to act quickly and efficiently to stem the blood loss. To further challenge trainees, the wound is complicated with fractured bone. The unit can be used repeatedly by trainees ensuring they understand the required skill, strength and confidence needed to effectively treat this critical injury.
