TRAUMASIM®

WHERE REALISM COUNTS

EMERGENCY TOURNIQUET TRAINER

TraumaSim's Emergency Tourniquet Trainer offers real time feedback for correct tourniquet application. Haemorrhage will stop when the skill is performed correctly.

INCLUDES

BLOOD DELIVERY

5 litre Hand Pressure Pump. Allows for consistent pressurized flow and holds enough fluid for large training and repeat uses.

CLAMPS

Clamps supplied allowing the unit to be secured to tables ensuring a stable and robust training experience. Unit can be used unclamped for floor use.

RED FOOD DYE

TraumaSim supplies red dye to colour the water and simulate blood. This ensures easy clean up and is a cost effective simulation solution

SINGLE, DOUBLE OR QUAD SETS

Sets to be run off one pump for large training groups.

TraumaSim's Emergency Tourniquet Trainer (ETT) was the world's first tourniquet training unit. This realistic and reactive skills trainer was designed to aid in tourniquet application and repeat training for lifesaving haemorrhage control.

The ETT simulates a haemorrhaging limb amputation and when correct tourniquet technique is used the bleeding will occlude. This unit can be used as a wet or dry training aid and with all styles of tourniquets. The unit can be used repeatedly by trainees ensuring they completely understand the required skill, strength and confidence required to safely use a tourniquet.

The ETT unit is incredibly robust and has been used by Defence Forces, Special Operations, Medics, Police, Paramedics, Emergency Responders, First Aid Trainers, Fire and Rescue services, Hospitals and Universities around the globe.
