TRAUMASIM®

WHERE REALISM COUNTS

# HAEMORRHAGE CONTROL SIMULATOR-JUNCTIONAL

TraumaSim's Haemorrhage Control Simulator - Junctional was designed to aid in tourniquet application, wound packing - both junctional and standard wounds, haemostatic dressing and stump care.

## INCLUDES

### BLOOD DELIVERY

5 litre Hand Pressure Pump. Allows for consistent pressurized flow and holds enough fluid for large training and repeat uses.

### RIGID CASE

Supplied in a rigid storage case to protect the unit and allow for easy transport and storage.

### RED FOOD DYE

TraumaSim supplies red dye to colour the water and simulate blood. This ensures easy clean up and is a cost effective simulation solution

TraumaSim's Haemorrhage Control Simulator - Junctional is a realistic, robust training aid for teaching and practicing the most critical and difficult of external haemorrhages – junctional wounds.

This training aid has 3 individual bleeding wounds allowing for group training with multiple actions being completed in one drill. The wounds will need to have correct technique and pressure applied for the haemorrhage to be controlled. The unit can be used as a wet or dry training aid and can be used repeatedly by trainees ensuring they understand the required skill, strength and confidence needed to safely use a tourniquet, wound pack and save a life.

This unit is incredibly robust and has been used by Defence Forces, Special Operations, Medics, Police, Paramedics, Emergency Responders, First Aid Trainers, Fire and Rescue services, Hospitals and Universities around the globe.
