Add realism and diversity to your classroom with a realistic silicone skin for CPR manikins

TRAUMASIM®

THE MANNISKIN

A LOW COST AND IMMEDIATE HIGH IMPACT SKIN TO UPGRADE YOUR CURRENT LAERDAL "LITTLE ANNE" CPR MANIKIN

Did you know that only 39% of women who experience an out-of-hospital cardiac arrest receive life saving CPR from a bystander?

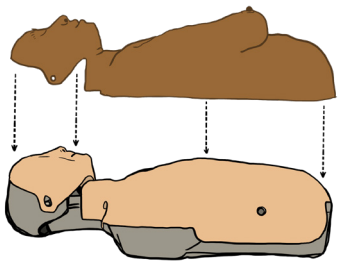

In the event of a cardiac arrest, research has shown that support from the public in the first 3-4 minutes is critical and significantly improves the chances of not only surviving the event, but making a return to a healthy life.

In addition to shocking survival rates with over 30,000 Australian's suffering from cardiac arrest each year and only 1 in 10 surviving, separate US and European studies show that women are less likely to receive CPR from a bystander – and we need to change these statistics!

The thought of pushing hard and fast on the center of a woman's chest can be confronting and raises concerns of physical hand placement plus required force. This is why realism in training and simulation is critical to inform, educate and prepare civilians and bystanders to act and respond in any emergency situation.

This product range is available in 11 different skin pigments and enables First Aid trainers to quickly apply a realistic skin over current Little Anne manikins and immediately add realism and diversity to their training.

"THE FUTURE OF BYSTANDER CPR IS IN YOUR HANDS. ARE YOU CREATING THE FUTURE YOU WANT?"
